

(a) $800, \text{Hotel}(800) \Rightarrow 500$ $500 - \text{Attire} + \text{Hotel}(\frac{800}{500}) \Rightarrow 20.4$

(b) $900 - 600 = 300 \times 3 = 900$ (Uniform Pricing)

$300 \times 2 + 400 = 1000$ (Non-uniform Pricing)

(c) Separate Pricing = $800 - 300 = 500 \times 2 = 1000$

Bundling = 1000 . $1600 - 600 = 1000 \rightarrow 1000$
